

Home work assigned 10th Oct 2009

a) Take a halanta pratipadikam like Marut and add the sup vibhakti endings to see what you get. More enthusiastic people can try a few other halanta ending nouns. The results should match the declensions in the dhatumanjari (except some small sandhi changes).

b) label the pratyas in the pratyas spreadsheet as कित्, पित्, शित् etc based on the इत् letters the pratyays have. Would be very useful to do this at least for vibhakti and non-vibhakti spreadsheet tabs. You may also want to identify them as sarvadhātuka or ardhadhātuka.
